PRIOR AUTHORIZATION REQUEST FORM

PATIENT INFORMATION

Name: Margaret A. Whitfield Date of Birth: 03/14/1958 (Age 68)
Sex: Female MRN: RFM-0098231
Member ID: MCR-4471902A Plan: Medicare Part B Auth #: _____

REFERRING PROVIDER

Provider: Daniel Osei, MD (Internal Medicine) NPI: 1902384756
Date of Request: 07/18/2026 Last Office Visit: 07/09/2026

REQUESTED ITEM / SERVICE

Item: Continuous Glucose Monitor (CGM) - receiver + sensors, 90-day supply
HCPCS: E2103 (receiver), A4239 (supply allowance) Quantity: 1 system + supplies
Place of Service: Home (12) Duration: 12 months

CLINICAL JUSTIFICATION / DIAGNOSIS

Primary Diagnosis: Type 2 diabetes mellitus without complications (ICD-10 E11.9).

Ms. Whitfield is a 68-year-old female with a 9-year history of Type 2 diabetes, currently managed on a basal-bolus INSULIN regimen: insulin glargine 22 units subcutaneous nightly and insulin lispro 6 units with meals. She is performing fingerstick self-monitoring 4 or more times per day. Despite adherence, glycemic control remains suboptimal.

Most recent labs (07/02/2026): Hemoglobin A1c 8.4 % (LOINC 4548-4).
Fasting glucose 176 mg/dL. Documented episodes of morning hypoglycemia (glucose 58-64 mg/dL) reported at the 07/09/2026 visit.

A continuous glucose monitor is medically necessary to guide insulin titration, reduce hypoglycemia risk, and improve glycemic control in this insulin-treated patient who is already testing frequently. The patient has been trained on device use and will follow up in 3 months.

I attest that the above information is accurate and that the requested item is medically necessary for the care of this patient.
